Introduction

This decade has brought with it several disturbing new trends: unprecedented numbers of high school drop-outs; high-profile incidents involving youth and deadly violence; and projections of labor shortages coupled with the rising and significant need among employers for workers with specialized talents. As a result, there is a growing interest among communities in investing in youth. Communities, including schools, need strategies to improve working relationships that prepare young people as they transition to adulthood.

This support encompasses strategies that ensure high academic achievement, completion of high school, post-secondary enrollment, and competitive employment. Single programs are not comprehensive enough to meet the needs of all youth. As a result, communities that want more effective and efficient ways of providing these services are finding ways to better connect individual agency resources into a single system for youth. Many communities, states, and governments are utilizing mapping strategies. Mapping facilitates the identification, alignment, and leveraging of community resources to improve the educational, employment, and developmental needs of all youth, including youth with disabilities.

What is Mapping?

Mapping provides an alternative approach to the more common “needs” or “deficit” models of youth services. Mapping focuses on what communities have to offer by identifying assets and resources that can be used for building a system. It is not a “one-shot” drive to create a published list or directory, but rather a catalyst for joint planning and professional development, resource and cost sharing, and performance-based management of programs and services.

Although there is no common definition for mapping, it is, generally, a methodology used to link community resources with an agreed upon vision, organizational goals, strategies, or expected
outcomes. There are several principles that are unique to mapping efforts. First, mapping strategies focus on what is already present in the community. The idea is to build on the strengths within a community. Second, mapping is relationship-driven. Key to mapping efforts is the development of partnerships—a group of equals with a common interest working together over a sustained period of time to accomplish common goals. Third, mapping embraces the notion that to realize vision and meet goals, a community may have to work across programmatic and geographic boundaries. These principles provide the foundation for the mapping process.

The Mapping Process

Communities have myriad resources and activities directly and indirectly related to meeting the needs of youth. Yet, these resources are commonly duplicative when used in isolation of one another. Fortunately, mapping these youth resources is a straightforward process. It starts with establishing a shared vision, definitions, priorities, and desired results.

For example, a community vision might be to improve the transition results for youth with disabilities. Some goals within this vision might include the reduction of dropout rates, or an increase in the number of students pursuing postsecondary education. Mapping can address curriculum, financial resources, human resources, policies and legislation, state academic standards, and youth and adult services related to these goals.

Regardless of where mapping takes place or the content being mapped, the process is the same. Once a vision and aligned goals are recognized, community partners must work together to identify the type of mapping to be completed, data collection strategies, and related timelines. Once data are collected, key stakeholders analyze the data to identify assets and overlaps, as well as any priorities that lack resources. Community partners then design strategies to build on strengths and eliminate gaps. The last step in the process is the implementation of the action plan or strategies designed by the stakeholders—employing the resource map in a strategic way to accomplish the established vision and goals of the community. It is critical throughout the mapping process that partners meet on a regular basis and that a leader convenes the group.

Benefits of Mapping

The benefits of resource mapping are many. As a result of taking part in this process, communities can develop a more results-driven system that supports an improved
secondary school experience, higher rates of post-secondary school enrollment and completion, and successful adult outcomes including competitive employment and community living. Creating a comprehensive system enables all young people to access services that allow them to lead full, productive lives.

Specifically, the resource mapping process can help a community (1) gain in-depth information about an agency’s policies, procedures, funding streams, and collaborative practices (2) identify opportunities and challenges for meeting the transition needs of youth with disabilities, and (3) provide a comprehensive set of policy recommendations across agencies, along with opportunities for interagency collaboration.

Other benefits include:
• Identification of new resources to develop, enhance and sustain goals;
• Determination of whether existing resources are being used effectively to achieve expected outcomes;
• Improved alignment and coordination of resources;
• Enhanced coordination and collaboration among stakeholders with relevant resources; and
• Development of new policies and legislation to better meet goals and objectives.

In summary, mapping is a process that requires strong partnerships; clear goals that everyone in the partnership supports; good communication; commitment to collecting relevant data and analyzing the data for gaps and overlaps; on-going evaluation to ensure continuous improvement; and specific, strategic actions based on the information learned.

Examples of Mapping Efforts

Instead of using planning strategies driven by funding sources and categories of youth, some communities are building systems that promote strong partnerships and utilize diverse community resources. This includes planning more closely with personnel outside of the disability field and working in partnership with broader, more generic youth providers. Examples of these efforts exist across the United States. This brief will focus on specific mapping initiatives in Kentucky and Minnesota.

Example: Local Level Mapping

In Kentucky, several communities are working to better connect resources for youth with
disabilities to broader community services focused on youth development. Citizens of Lexington, for example, engaged in the mapping process because they wanted to (1) identify the resources available for youth with disabilities during the transition process, (2) discover ways to enhance school and postschool options available to youth, and (3) make broader, more generic youth resources available to all youth in the community.

Because stakeholders in Lexington have had success collaborating on past initiatives, they were easily able to bring together a broad group of stakeholders to begin the mapping process. Although the group initially came together to improve transition services, they did not limit themselves to disability-specific service providers and professionals. At the table were representatives from their local one-stop, community-based organizations, youth intermediary organizations, and a representative from the mayor’s office. Group members started their work by recognizing the strengths in their community. In doing so, they realized that they should focus their planning not only on youth with disabilities, but all youth in the community. They reasoned that ultimately, this approach will provide better access to resources in the community for any youth who needs them.

Lexington’s vision is to have a community network that partners with youth to identify and provide resources, and to support them in healthy youth development. Although Lexington is still in the beginning stages of mapping, participants see the benefits—identifying resources and building partnerships that improve youth services. The team plans to create more partnerships with a broader group of community stakeholders, including youth, and to continue to collect information about resources, gaps, and overlaps.

Example: State Level Mapping

In Minnesota, the mapping initiative was originally started by the leaders in the state’s Department of Economic Security, and Department of Children, Families & Learning, as well as the state college and university systems. These leaders were interested in improving the career and workforce development of youth across the state.

To kick off the resource mapping strategy, state-level leaders held a series of regional training events throughout the state. These events were designed to bring together community teams of education and workforce representatives to learn how to discover,
leverage, and align community resources and services to improve the educational, employment, and development needs of all youth in their communities. As a result, 60 community teams from across the state gained a better understanding of the resources in their community and how to align them to meet the needs of youth.

Soon after the start of the mapping initiative, participants realized that representatives from the Community Transition Interagency Committees (CTICs) should be engaged. In Minnesota, the CTICs are responsible for bringing together agencies that assist youth with disabilities as they make the transition into adult life. One of the six mandated functions of the CTICs is to identify current community services, programs, and funding sources for secondary and postsecondary youth with disabilities and their families. The resource mapping strategy already begun at the state level clearly aligned with the work that the CTICs were mandated to complete. Thus, leaders in the state connected the CTICs to the existing resource mapping efforts already underway. The relationship among the Hennepin, Carver, Scott Youth Council, and the Northwest Hennepin CTIC is an example of a partnership between the generic youth employment system and the transition system that serves youth with disabilities.

Currently, partners at the state and local levels are designing an electronic database of all community youth resources and services. They plan to use it as a communication tool among community stakeholders, and as a way to inform youth and families of available services.

Summary

The number of programs serving youth has grown exponentially during the past two decades. Yet, these programs usually operate independently of one another. Instead of having a comprehensive system focused on the needs of youth, communities often have disconnected programs within a weak system.

Youth with disabilities and their families are often puzzled by the mission of various services and programs designed to assist in the transition process. As a result, far too many youth do not fully access and benefit from services available in the community and schools. Mapping, on the other hand, can help to identify resources in the community and align various organizational missions, policies, actions, and day-to-day management so that young people can have access to the services they need.

General Resources

Center for Youth Development & Policy Research
Academy for Educational Development
1875 Connecticut Avenue, NW
The Community YouthMapping (CYM) project at the Center for Youth Development & Policy Research is based on the premise that not all youth data needs to focus on problems. Rather, CYM is a catalyst for motivating youth by collecting information on places to go, things to do, and available opportunities and services.

The McKenzie Group
1101 17th Street, NW, Suite 1200
Washington, DC 20036
phone: 202-466-1111
www.mckenziegroup.com

The McKenzie Group (TMG), an educational consulting firm, has designed mapping services to assist their clients in meeting and sustaining strategic goals and objectives, particularly those related to education and youth development. TMG provides a variety of mapping services, including community asset analysis, resource utilization analysis, and policy/legislative mapping analysis.

School and Main Institute
225 Friend Street, # 11, 7th Floor
Boston, MA  02114
phone: 800-873-2120
http://www.schoolandmain.org/

This 501(c)(3) non-profit organization helps practitioners design results-focused strategies for serving youth, and master the partnership skills needed to achieve these results. SMI teaches practitioners how to navigate complex workforce preparation and educational environments so they can build long-term solutions for the challenges facing young people. Their resource-mapping efforts support local, regional, and state-level efforts.

Search Institute
615 First Avenue NE, Suite 125
Minneapolis, MN  55413
phone: 800-888-7828
www.search-institute.org
The Search Institute’s mission is to advance the well-being of adolescents and children by generating knowledge and promoting its application. To accomplish this mission, the Search Institute has developed a framework of 40 developmental assets, which are positive experiences, relationships, opportunities, and personal qualities that young people need in order to be healthy, caring, and responsible.

Related Resources

Table One

Mapping is a process that requires a strong partnership; clear goals that everyone in the partnership supports; good communication; commitment to collecting relevant data and analyzing the data for gaps and overlaps; on-going evaluation to ensure continuous improvement; and specific, strategic actions based on the information learned once the map is completed.

Step 1: Pre-Mapping /Assessment

Visioning

• “Scan” the future-- why collaborate?
• Develop consensus around the need to do business in coordination and align resources
• Identify key themes to guide your process and decision-making
• Identify the customers of your actions
• Identify the benefits and beneficiaries of your actions

Goal-Setting
• Identify the desired results
• Set measurable objectives
• Get and give permission to think creatively from funding sources, others

Partnership-Building
• Define and commit to maintaining an effective partnership
• Identify all current and potential partners
• Encourage diversity of the team
• Select a credible, objective “convener”
• Build a common language/definitions
• Recognize and address the needs of individual partners (identify “what’s in it” for partners)

Step 2: Mapping
Selecting a Process
• Select a process to gather data; partners commit to contributing timely, accurate information
• Include fund utilization: Are you making the most of your current resources?
• Include resource identification: What new resources could you use/align to meet your goals?
• Include community asset analysis: What does your community have to offer that assists you in meeting your goals?
• Include policy alignment: How well do your state/local policies currently support your goals? How can resource mapping further support your state/local policies, practices and goals?
• Identify gaps, intersections, and any obstacles to alignment

Identifying and Collecting Data
• Identify content/goal to be mapped
• Determine how you will collecting data
• Collect and validate data
• Stay focused on your goals—don’t follow the funds

Developing your Product/s
• Synthesize findings keeping original goals in mind
• Present information in a useable formats for various target audiences
• Communicate trends

Step 3: Implementing Your Map for Strategic Results
Strategic Planning
• Design a plan to better align the resources you have identified
• Maintain consensus among partners
• Address challenges to implementing your plan

Communication Strategies
• Keep key stakeholders informed
• Create an atmosphere conducive to change
• Do the work of sustaining a healthy partnership
• Use technology effectively to communicate and disseminate information

Supporting Community Action
• Give permission to think and act creatively
• Provide recognition for local innovation and quality
• Focus on accountability—set goals and measure progress
• Provide networking opportunities

Step 4: Evaluation/Mid-course Corrections
Keeping Current
• Update vision, goals and plan as needed
• Keep map up-to-date

Continuing to Measure
• Gauge progress and impact
• Focus on real-time assessment rather than just summative evaluation
• Capture benefits
• Communicate results, challenges

Maintaining Momentum
• Retool/expand your partnership
• Maintain an environment conducive to change
• Be prepared to deal with unexpected challenges
